Chapter 1

Introduction

In this study, we survey the notational diversity of present-day mathematical expressions, in order to uncover their linguistic phenomena. A practical motivation for this study is to provide a foundation for determining the boundary between syntactic and semantic phenomena in said expressions, from the perspective of language modeling. The ultimate goal of this project is to construct a grammar of mathematical expressions, which captures all relevant syntactic properties established in this study, and allows for the semantic analysis necessary to model and observe the semantic relationships.

1.1 Motivation

We want to enable machine-reading of formulas, in order to provide a variety of user-assistance services, such as semantic search, text-to-speech synthesis, semantic interactions (definition lookup), as well as computer algebra support (“evaluate subexpressions on demand”) and ultimately computer verification (“does that proof step really hold?”).¹

EdN:1

1.2 Related Resources

Notation census, beginnings of study are in Deyan’s thesis, Naproche and FMathL have examples, but no real systematic study.²

Table 1.1: Sandbox of Ten Random ARXIV Papers from Diverse Scientific Subfields

1.3 Experimental Setup

The primary corpus on which we base this investigation is the Cornell pre-print archive “ARXIV”³, consisting of over 700,000 articles in 37 scientific subfields.

arXiv Sandbox

4

As a secondary resource, we will also consult entry-level literature on high-school mathematics, in order to exhibit basic phenomena, as well as to demonstrate phenomena apriori known to the authors.⁵

Expression	Meaning	Syntax
1. $W \in \mathcal{P} \cap \mathcal{Z}$ Discussion: set ops precede set relations, [Train1]	set membership	infix relation
2. $\nu : \times^n \mathbb{V} \rightarrow \mathbb{R}$ Discussion: n -ary cross-product, [Train1]	a map	typed modifier
3. $\mathcal{Z}^* = \{X \in \mathcal{V} \mid \omega(X, W) \in \mathbb{Z}, \text{ for all } W \in \mathcal{Z}\}$ Discussion: NL mixins, quantified relation, [Train1]	definition to set	typed modifier
4. $\text{span}_{\mathbb{R}}\{W_1, \dots, W_g\}$ Discussion: set operators can take fenced yet not simply <i>grouped</i> arguments, [Train1]	span of a set	application
5. $\mathcal{BS}_{\mathcal{P}} = \bigcup_{\mathbf{q} \in (\mathbb{Z}/k\mathbb{Z})^g} \Lambda_{\mathbf{q}}$ Discussion: n -ary union, ranges over subscript, [Train1]	definitional assignment	infix relation
6. $L_{12} = L_{\mathcal{P}_1} \cap L_{\mathcal{P}_2} \neq 0$ Discussion: acts as relation, is it modified or chained?, [Train1]	non-transversal intersection	modified relation
7. $\alpha \in GL(g, \mathbb{Z}) \subset Sp(2g, \mathbb{Z})$ Discussion: membership comes after set inclusion, due to well-typedness!, [Train1]	statement	infix relation

Table 2.1: Set Theory Notations, Part 1

	Expression	Meaning	Syntax
1.	$(\mathcal{V}/\mathcal{Z}, k\omega)$ Discussion: [Train1]	symplectic torus	circumfix constructor
2.	\mathcal{Z} Discussion: [Train1]	self-dual lattice	atom abbreviation
3.	(\mathcal{V}, ω) Discussion: [Train1]	symplectic vector space	circumfix constructor
4.	$Lag(\mathcal{V})$ Discussion: [Train1]	Lagrangian Grassmannian	circumfix constructor
5.	$Lag_4(\mathcal{V})$ Discussion: [Train1]	4-fold covering space	applicative constructor
6.	\mathcal{M}_Σ Discussion: [Train1]	moduli space	scripted constructor
7.	Σ Discussion: [Train1]	Riemann surface	atom variable
8.	$H^1(\Sigma; \mathbb{R})$ Discussion: [Train1]	chomology space	applicative constructor
9.	$H^1(\Sigma; \mathbb{R})/H^1(\Sigma; \mathbb{Z})$ Discussion: [Train1]	torus	applicative constructor
10.	(M, ω) Discussion: [Train1]	symplectic manifold	circumfix constructor
11.	$f \in \mathcal{C}^\infty(M)$ Discussion: [Train1]	smooth function	modified atom
12.	X_f Discussion: [Train1]	field	scripted constructor
13.	\lrcorner Discussion: Formed via <code>\mathop</code> in <code>T_EX</code> , [Train1]	interior product	complex infix operator
14.	$[\omega] \in H^2(M; \mathbb{R})$ Discussion: [Train1]	cohomology class	modified complex object
15.	(\cdot, \cdot) Discussion: [Train1]	notation patter, hermitian metric	tuple

Table 2.2: Differential Geometry Notations, Part 1

	Expression	Meaning	Syntax
16.	$-2\pi i \omega$ Discussion: [Train1]	complex number	arithmetic expression
17.	(\mathcal{L}, ∇) Discussion: [Train1]	prequantum line bundle	circumfix constructor
18.	$U \subset M$ Discussion: [Train1]	open subset	modified atom
19.	$\mathcal{L} _U$ Discussion: postfix restriction via “ $ _U$ ”, [Train1]	restricted line bundle	modified atom
20.	$s \in \Gamma(U; \mathcal{L})$ Discussion: [Train1]	nonzero section	modified atom
21.	$\nabla s = -2\pi i \theta s$ Discussion: [Train1]	equation	relation
22.	$\omega _U = d\theta$ Discussion: [Train1]	equation	relation
23.	$T_x M$ Discussion: invisible infix bundle-forming operator, [Train1]	bundle	applicative constructor
24.	$\omega _{\mathcal{P}_x} \equiv 0$ Discussion: [Train1]	equivalence	relation
25.	$\dim \mathcal{P}_x = \frac{1}{2} \dim T_x M$ Discussion: \dim has lower precedence than invisible bundle-formation, [Train1]	equality	relation
26.	$[X, Y] \in \mathcal{X}_{\mathcal{P}}(M)$ Discussion: used as verb phrase in sentence, [Train1]	commutator is in set	relation
27.	$\nabla^{\mathcal{P}}$ Discussion: big op?, [Train1]	covariant differentiation	scripted prefix op
28.	$\nabla^{\mathcal{P}} : \mathcal{X}_{\mathcal{P}}(M) \times \mathcal{X}_{\mathcal{P}}(M) \longrightarrow \mathcal{X}_{\mathcal{P}}(M)$ $(X, Y) \longmapsto \nabla_X^{\mathcal{P}} Y,$ Discussion: alignment splits type statement, trailing comma [Train1]	domain specification	typing modifier
29.	$(\nabla_X^{\mathcal{P}} Y) \lrcorner \omega = X \lrcorner d(Y \lrcorner \omega).$ Discussion: trailing dot, [Train1]	definitional assignment	infix relation
30.	$\Pi_{\mathcal{P}} : M \rightarrow M/\mathcal{P}$ Discussion: [Train1]	canonical projection map	typed modifier

Table 2.3: Differential Geometry Notations, Part 2

	Expression	Meaning	Syntax
31.	T^g Discussion: script means dimensionality[Train1]	g -dimensional torus	complex object
32.	q_1, \dots, q_g Discussion: [Train1]	coordinate functions	enumerative sequence
33.	X_{q_1}, \dots, X_{q_g} Discussion: [Train1]	Hamiltonian vector fields	enumerative sequence
34.	$q_1 \circ \Pi_{\mathcal{P}}, \dots, q_g \circ \Pi_{\mathcal{P}}$ Discussion: sequence elements are applicative objects, [Train1]	functions	enumerative sequence
35.	$\gamma_1(\Lambda), \dots, \gamma_g(\Lambda)$ Discussion: [Train1]	basis for a homology group	enumerative sequence
36.	$j_i(y) = \int_{\gamma_i(\Lambda)} \theta$, where $y = \Pi_{\mathcal{P}}(\Lambda)$, Discussion: integral has no binder, nat. lang. modifier, punctuation, [Train1]	definitional assignment	infix relation
37.	$\text{Det } \mathbb{V} = \bigwedge^n \mathbb{V}$ Discussion: n -ary wedge?, hidden binder on \mathbb{V} , [Train1]	definitional assignment	infix relation
38.	$\kappa(X_{j_1} _{\Lambda}, \dots, X_{j_g} _{\Lambda}) = 1$. Discussion: bars as postfix, within a sequence [Train1]	canonically defined density	infix relation
39.	$(\nabla_W^{\mathcal{P}} \nu)(X_1^*, \dots, X_g^*) = W(\nu(X_1^*, \dots, X_g^*))$, Discussion: applied function is fenced, [Train1]	definitional assignment ¹	infix relation
40.	$0 \longrightarrow \Omega_{\mathcal{P}}^0(\mathcal{L}_{\mathcal{P}}) \xrightarrow{\nabla^{\mathcal{P}}} \Omega_{\mathcal{P}}^1(\mathcal{L}_{\mathcal{P}}) \xrightarrow{\nabla^{\mathcal{P}}} \dots \xrightarrow{\nabla^{\mathcal{P}}} \Omega_{\mathcal{P}}^g(\mathcal{L}_{\mathcal{P}}) \longrightarrow 0$ Discussion: arrows as transitions, ellipsis, [Train1]	complex	type?
41.	$\bigwedge^k \mathcal{P}^* \otimes \mathcal{L}_{\mathcal{P}}$ Discussion: which operator binds first?, [Train1]	line bundle	applicative constructor?
42.	$c_{\Lambda} = \int_{\Lambda} f_{\Lambda} \hat{\kappa}$ Discussion: bound variable in integral subscript [Train1]	definitional assignment	infix relation
43.	$H^g(M; \mathcal{P}, \mathcal{L}_{\mathcal{P}}) \cong \bigoplus_{\Lambda \in \mathcal{BS}_{\mathcal{P}}} S_{\Lambda}$ Discussion: n -ary \oplus , congruence [Train1]	natural isomorphism	infix relation
44.	(s, s') Discussion: shorthand constructor for a function [Train1]	function on Λ	circumfix constructor
45.	$\int_{\Lambda} (s, s') \mu * \mu'$ Discussion: binder in subscript, infix operator “*” binds stronger than invisible apply [Train1]	integral application	prefix application

Table 2.4: Differential Geometry Notations, Part 3

	Expression	Meaning	Syntax
46.	$\langle\langle\cdot, \cdot\rangle\rangle : \mathcal{H}_{\mathcal{P}_2} \times \mathcal{H}_{\mathcal{P}_1} \rightarrow \mathbb{C}$ Discussion: operator pattern, along with operator type [Train1]	sesquilinear pairing pattern	type modifier
47.	$\omega = \sum_{i=1}^g dp^i \wedge dq^i$ Discussion: sum over wedge applications, [Train1]	symplectic form	infix relation
48.	$p^i = \text{constant}$ Discussion: bad text/math modality, RHS outside of math[Train1]		
49.	$W \cdot (X, \lambda) = (X + W, \epsilon(W) e^{\pi i k \omega(W, X)} \lambda),$ Discussion: defines operator \cdot , arguments quantified via NL following the math expression,[Train1]	\mathcal{Z} -action definition	infix relation
50.	$l (l \leq g)$ Discussion: invisible modifier, using fenced relation,[Train1]	dimension	modified object
51.	$(W_1, \dots, W_g; W_1^\perp, \dots, W_g^\perp)$ Discussion: distinction between commas and semicolon, [Train1]	symplectic basis	circumfix constructor
52.	$i = 1, \dots, g$ Discussion: defined to be a sequence? or modifying restriction over a range?, [Train1]	definitional range	infix relation
53.	$X \in \mathcal{V}, W \in \mathcal{P}$ Discussion: comma denotes NL “and” between two relational statements,[Train1]	conjunction of statements	sequence of relations
54.	$k \omega(W_i, X) \in \mathbb{Z}, \quad i = 1, \dots, g,$ Discussion: four scopes of commas, also hinted by spacing, [Train1]	statement	modified relation
55.	$q_i \pmod{k}$ Discussion: fenced modifier argument, prefix mod?,[Train1]	modulo	invisible modifier
56.	$\Lambda_{\mathbf{q}=(q_1, \dots, q_g)} : k \omega(W_i, X) = q_i \pmod{k}, i = 1, \dots, g.$ Discussion: complex expression, rich in phenomena,[Train1]	orbit description	infix relation
57.	$\hat{\Lambda}_{\mathbf{q}, \mathbf{l}} = \{X \in \mathcal{V} \mid k \omega(W_i, X) = q_i + k l_i, i = 1, \dots, g\}.$ Discussion: modified relation!, [Train1]	definitional assignment	infix relation
58.	$\{\sigma_{\mathbf{q}} = s_{\mathbf{q}} \otimes \delta_{\mathbf{q}}\}_{\mathbf{q} \in (\mathbb{Z}/k\mathbb{Z})^g}$ Discussion: relational modifier to set constructor argument, subscripted set range, [Train1]	standard unitary basis if $\mathcal{H}_{\mathcal{P}}$	set constructor
59.	$k \omega(W_i, T_j) = \delta_{ij} \quad i, j = h + 1, \dots, g$ Discussion: spaces determine equality scopes, act as conjunctions; equality on sequence and range[Train1]	statement	infix relation
60.	$[\mathbf{l}] = [(l_1, \dots, l_g)] \in \mathbb{Z}^g / \omega(2, 1) \mathbb{Z}^g$ Discussion: two relations modify $[\mathbf{l}]$, chained modifying? or nested modifying?[Train1]	equivalence class	doubly modified object

Table 2.5: Differential Geometry Notations, Part 4

	Expression	Meaning	Syntax
61.	${}^t\mathbf{q}_1$ Discussion: prescript t , but what does it mean?, [Train1]	?	scripted atom
62.	$\sum_{\substack{\mathbf{q}_2 \\ 0 \leq q_{2i} \leq k \det \omega(2,1) -1}} \sum_{[I], [I']} \dots$ Discussion: stacked subscripts, and subscript sequence[Train1]	nested summation	prefix operator apply
63.	$\oplus_{i=1}^g \mathbb{Z}W_{1i} \oplus \oplus_{i=1}^g \mathbb{Z}W_{1i}^\perp$ Discussion: mixing prefix n -ary \oplus with infix binary \oplus . [Train1]	?	infix apply
64.	$\tau : Lag(\mathcal{V}) \times Lag(\mathcal{V}) \times Lag(\mathcal{V}) \rightarrow \mathbb{Z}$ Discussion: \times is weaker than invisible application, when in a typing context?, [Train1]	function declaration	typed modifier
65.	$L_1, L_2, L_3, L_4 \in Lag(\mathcal{V})$ Discussion: multirelation? membership holds for each of the sequence entries on LHS, [Train1]	set membership	infix relation
66.	$r \equiv (\text{mod } q)$ Discussion: second-order relation, r is used as a superscript notation for modulo apply, [Train1]	equivalence	infix relation
67.	$U_{\mathcal{P}}(b) = F_{\mathcal{P}, b\mathcal{P}} \circ b : \mathcal{H}_{\mathcal{P}} \rightarrow \mathcal{H}_{\mathcal{P}}$ Discussion: modifier for assignment, followed by modifier for type, [Train1]	unitary operator definition	typed modifier
68.	$(W'_i = bW_i ; W'^{\perp}_i = bW^{\perp}_i)$ Discussion: two modified arguments to the main constructor, [Train1]	symplectic basis	circumfix constructor
69.	$(x, c) \in \mathcal{T} \times Sp(2g, \mathbb{R}) \xrightarrow{b} (b(x), bc) \in \mathcal{T} \times Sp(2g, \mathbb{R})$ Discussion: \times is not used in a typing sense, but in a cross-product sense, inducing a different arrow interplay [Train1]	left action	arrow transition
70.	Discussion: [Train1]		
71.	Discussion: [Train1]		
72.	Discussion: [Train1]		
73.	Discussion: [Train1]		
74.	Discussion: [Train1]
