March 28, 2012

## **Abstract**

This package provides macros for annotating L<sup>A</sup>T<sub>E</sub>X-authored mathematical expressions, with a focus on structural and syntactic properties.

## **Contents**

<b>1</b>	<b>Introduction</b>	<b>2</b>
<b>2</b>	<b>User Interface</b>	<b>2</b>
<b>3</b>	<b>Exhaustive Feature List</b>	<b>2</b>
<b>4</b>	<b>Implementation</b>	<b>2</b>

EdN:1

1

## 1 Introduction

EdN:2

2

## 2 User Interface

```
\documentclass{article}

An annotation for  $1+2=3$ :
@=(@+(1,2)) ???
```

Figure 1: Example use of `\mobile`

## 3 Exhaustive Feature List

## 4 Implementation

We proceed to doing the actual work on the L<sup>A</sup>T<sub>E</sub>X side of affairs.

To start things off, we provide Tikz-based tree building macros.

```
1 \*package
2 \newcommand{\labelentry}{.}
3 \newcounter{entryi}
4 %% ENTRIES for expression case study:
5 \newenvironment{nextentries}[2]%
6 {\begin{table}[hp]\def\capentries{#1}\def\labelentries{#2}%
7 \begin{tabular}{|l|l|}\hline & Expression & Denotation & Annotation \\\%
8 \hline\end{tabular}\caption{\capentries}\label{\labelentries}\end{table}}%
9
10 \newenvironment{entries}[2]%
11 {\setcounter{entryi}{1}\begin{nextentries}{#1}{#2}}
12 {\end{nextentries}}
13
14 \newcommand\entry[4]{\hline\[-4mm] {\theentryi\labelentry}\stepcounter{entryi} & #1 & #2 & {\s
15 \package}
```

---

<sup>1</sup>EdNOTE: we need this for the arXiv case study.

<sup>2</sup>EdNOTE: talk about keywords, trees, tikz
