## Chapter 1

---

# Introduction

---

In this study, we survey the notational diversity of present-day mathematical expressions, in order to uncover its linguistic phenomena.

## 1.1 Motivation

We want to enable machine-reading of formulas, in order to provide a variety of user-assistance services, such as semantic search, text-to-speech synthesis, semantic interactions (definition lookup), as well as computer algebra support (“evaluate subexpressions on demand”) and ultimately computer verification (“does that proof step really hold?”).<sup>1</sup> EdN:1

## 1.2 Related Resources

Notation census, beginnings of study are in Deyan’s thesis, Naproche and FMathL have examples, but no real systematic study.<sup>2</sup> EdN:2

## 1.3 Experimental Setup

The primary corpus on which we base this investigation is the Cornell pre-print archive “arXiv”<sup>3</sup>, consisting of over 700,000 articles in 37 scientific subfields. EdN:3

As a secondary resource, we we will also consult entry-level literature on highschool mathematics, in order to exhibit basic phenomena, as well as to demonstrate phenomena apriori known to the authors

## Chapter 2

---

# A Study of Mathematical Syntax

---

## 2.1 Basics

### Foundations

4 5 6

EdN:4

EdN:5

EdN:6

### High School

7 8

EdN:7

EdN:8

## 2.2 Discrete math

### Set Theoretic Notations

9 10

EdN:9

EdN:10

### Logical Operators

11

EdN:11

---

<sup>4</sup>EdNOTE: arithmetic, grouping fences and equality

<sup>5</sup>EdNOTE: basic relations and orderings

<sup>6</sup>EdNOTE: arithmetic and algebraic sequences?

<sup>7</sup>EdNOTE: geometry here, otherwise a separate geometry subsection

<sup>8</sup>EdNOTE: trigonometry, complex and rational numbers

<sup>9</sup>EdNOTE: elementhood, inclusions, set constructors, overloaded arith ops

<sup>10</sup>EdNOTE: also maps : domains -> codomains, xRy notations

<sup>11</sup>EdNOTE: classic logic, HOL, type theories

## Combinatorics

12 13

## Number Theory

14 15 16 17

## Graph Theory

18 19 20

## Algebra

21 22 23 24

## Functions Theory

25

## 2.3 Continuous math

### Calculus

26

### Probability

27 28

---

<sup>12</sup>EDNOTE: Infinite sums

<sup>13</sup>EDNOTE: binomials, combinations, permutations,

<sup>14</sup>EDNOTE: modulo modifiers

<sup>15</sup>EDNOTE: tuples

<sup>16</sup>EDNOTE: divisibility notations  $a \mid b$  and  $b/a$

<sup>17</sup>EDNOTE: DLMF sneaky notations

<sup>18</sup>EDNOTE: edge and vertex notations

<sup>19</sup>EDNOTE: incidence and adjacency notations

<sup>20</sup>EDNOTE: Wiki is very nice: [http://en.wikipedia.org/wiki/Glossary\\_of\\_graph\\_theory](http://en.wikipedia.org/wiki/Glossary_of_graph_theory)

<sup>21</sup>EDNOTE: vectors

<sup>22</sup>EDNOTE: maps and complements

<sup>23</sup>EDNOTE: groups

<sup>24</sup>EDNOTE: lattices

<sup>25</sup>EDNOTE: talk about associativity of application and composition, “;” and “o” as notation variants, discuss complex examples

<sup>26</sup>EDNOTE: differentials, integrals, limits, remember brownian motion integral notations!

<sup>27</sup>EDNOTE: Bayes formula with multiple denotations of P

<sup>28</sup>EDNOTE: Various conditional and joint probability notations

## Interval Notation and Arithmetic

29

EdN:29

## Topology

30

EdN:30

## 2.4 Other fields

### Quantum Physics

31 32 :

EdN:31

EdN:32

---

<sup>29</sup>EDNOTE: introduce interval notations, then move to interval arithmetic

<sup>30</sup>EDNOTE: manifold constructors and notations

<sup>31</sup>EDNOTE: Bra-ket notation

<sup>32</sup>EDNOTE: computer science, biology, chemistry...
